SELECTED PROJECTS

UX/UI & Design Projects

Comic Reading Application

- Designed a manga reading application with a clean, intuitive, and user-friendly interface.
- Created User Flows, Wireframes, and Interactive Prototypes using Figma.
- Designed key features including Search, Categories, Favorites, and User Registration/Login.

Electronic Devices E-Commerce Application

- Designed screens for Product Search, Product Filtering, Product Details, and Shopping Cart.
- Organized product information using a clean, consistent, and intuitive interface to improve product browsing and usability.
- Designed a product detail page that clearly presents specifications, pricing, and key features to support users' purchasing decisions

Profile/Portfolio Website

- Designed a Portfolio Website in Figma to showcase projects, skills, and relevant experience.
- Organized content and project categories with a clear information architecture for easy navigation and browsing.
- Presented the design process, project outcomes, and featured work through a clean, modern, and user-friendly interface.

Android Studio Projects

Student Record Management Application

- Developed a Student Management Mobile Application using Kotlin.
- Implemented features to store, display, and manage student information efficiently.
- Designed a clean and user-friendly interface to simplify data management and improve usability.

Expense Tracking Application

- Developed a Personal Expense Tracking Mobile Application.
- Implemented features to add, manage, and view expense records with detailed transaction information.
- Displayed expense history and spending summaries to help users monitor and manage their personal finances.
