📍 Thailand Samutprakarn

ABOUT ME

4-year Information Technology student with a strong interest in Product design,UX/UI design and web development. Experienced in using Figma to create User Flows, Wireframes, and Prototypes, with a foundation in HTML, CSS, and JavaScript. Passionate about user-centered design and creating intuitive, user-friendly digital experiences. A responsible, fast learner who is eager to develop skills and grow as a UX/UI Designer.

EDUCATION

2023-Present	Bachelor of Information Technology	King Mongkut's University of Technology North Bangkok, Prachinburi Campus (KMUTNB)
2023-Present	High School	Debsirin samutprakarn

IT & TECHNICAL SKILLS

UX/UI Design:

Experienced in designing user-centered interfaces using Figma, including user flows, wireframes, prototypes, and responsive layouts. Familiar with design systems and creating consistent interfaces that improve usability and user experience.

Programming & Database:

Experienced in developing academic projects using Kotlin and Python, with practical knowledge of SQLite and MySQL for database design and CRUD operations.

Development Tools:

Proficient in using Figma, Android Studio, VS Code, Git, and GitHub for design, development, version control, and project collaboration.

OTHER WORK EXPERIENCE

Academic Project Experience:

Although I have not yet gained professional work experience, I have completed several university projects involving UX/UI design and application development. These projects provided hands-on experience in planning, designing, developing, testing, and presenting digital products while collaborating effectively with teammates.

FURTHER SKILLS

Communication:

Developed strong communication skills through university projects, presentations, and team discussions. Able to explain design ideas clearly, present project outcomes, and receive constructive feedback to improve the final result.

Teamwork:

Worked closely with teammates on multiple academic projects by sharing responsibilities, coordinating tasks, and supporting each other throughout the design and development process. Comfortable collaborating in a team environment to achieve common goals.

Problem Solving:

Enjoy analyzing user needs and identifying practical solutions through design and technology. Able to approach challenges logically and continuously refine ideas based on testing and feedback.

Time Management:

Managed multiple coursework deadlines and project milestones while maintaining the quality of work. Able to prioritize tasks effectively and complete assignments within scheduled timelines.

Adaptability:

Quick to learn new tools, technologies, and design approaches. Comfortable adapting to different project requirements and continuously improving technical and design skills.

PROJECT EXPERIENCE

E-commerce Application (UX/UI Design):

Designed the user experience and interface for an e-commerce application using Figma. Created user flows, wireframes, high-fidelity mockups, and interactive prototypes while focusing on intuitive navigation, visual consistency, and responsive layouts.

Accommodation Booking Application (UX/UI Design):

Designed a mobile application for accommodation booking from concept to prototype. Planned the user journey, organized information architecture, and developed a clean interface that simplified the booking process and enhanced usability.

Student Management Application (Android):

Developed an Android application using Kotlin and SQLite for managing student records. Implemented CRUD functionality and designed a simple interface that allowed users to efficiently add, edit, search, and delete data.

Personal Expense Tracker (Android):

Designed and developed a personal expense tracking application using Kotlin and SQLite. Built features for recording transactions, managing expense categories, and displaying financial information in an organized and user-friendly way.

Personal Portfolio Website:

Designed and developed a personal portfolio website to showcase UX/UI design projects and technical skills. Focused on creating a clean, responsive interface with clear navigation and an organized presentation of project information.

Football Team Database System (Database Design):

Designed and developed a relational database system for managing football team information. Created an ER diagram to define relationships between teams, players, coaches, matches, and player statistics. Applied database design principles to organize data efficiently and developed SQL queries for managing and retrieving football-related information.

Student Uniform Classification System (AI):

Developed an AI image classification system to identify different types of student uniforms based on their compliance with university regulations. Used MobileNetV2 with transfer learning to train the model and classify uploaded images into predefined categories.

INTERESTS & ACHIEVEMENTS

Interests:

Passionate about UX/UI Design, user-centered design, mobile application design, web technologies, and creating digital products that provide meaningful and intuitive user experiences. I actively explore new design trends and continuously improve my technical and creative skills through personal projects.

Achievements:

Successfully designed and completed multiple UX/UI and software development projects, including an e-commerce application, accommodation booking platform, student management system, expense tracking application, and a personal portfolio website. These projects strengthened both my design thinking and technical problem-solving abilities.
